DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see remarks, filed 02/17/2009, with respect to Claims 1-6, 8-13, 15, & 16 have been fully considered and are persuasive. The rejections of 102 & 103 have been withdrawn.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Wayne Breyer on 04/23/2009.

The application has been amended as follows:

Please amend the Claims as follows:

8. (Currently Amended) A method comprising:
positioning a sliding separator along a plurality of IR-transmitting optical fibers, wherein a change in the relative position of the sliding separator along the fibers alters a separation therebetween, wherein the alterable separation facilitates the engagement of the optical fibers with individual samples disposed in wells of any one of a variety of different-sized sample plates having different spacing between the wells; physically engaging a chemical entity to a first end of an IR-transmitting fiber; bringing said chemical entity in contact with a binding compound; contacting the first end of a first one of the optical fibers with a first sample within one of the wells, wherein the contact introduces a chemical entity and a binding compound to each other, thereby resulting in a first binding interaction; and

conducting a first thermal signal resulting from [[a]] the first binding interaction to a thermal sensor through said at first IR-transmitting optical fiber, wherein said-binding interaction occurs between said chemical entity and said binding compound.

9. (Currently Amended) The method of claim 8 further comprising physically engaging the chemical entity to the first end of the first optical fiber before contacting the first end of the fiber with the first sample, wherein the first sample contains the binding compound sliding a separator along said IR-transmitting fiber.

10. (Currently Amended) The method of claim 8 further comprising physically engaging the binding compound to the first end of the first optical fiber before contacting the first end of the first fiber with the first sample, wherein the sample contains the chemical entity wherein engaging a chemical entity further comprises inserting said first end of said IR-transmitting fiber into a sample carrier.

11. (Currently Amended) The method of claim 8 wherein bringing said chemical entity in contact with a binding compound further comprises inserting said first end of said IR-transmitting fiber into a well after engaging said chemical entity further comprising: contacting the first end of a second optical fiber with a second sample within another one of the wells, wherein the contact introduces a second chemical entity and the binding compound to each other, thereby resulting in a second binding interaction, wherein contact between the first optical fiber and the first sample and the second optical fiber and the second sample is simultaneous; conducting a second thermal signal resulting from the second binding interaction to a thermal sensor through said second IR-transmitting optical fiber; and comparing the first thermal signal and the second thermal signal to one another.

Claim 17: (Cancelled).

Allowable Subject Matter

1. Claims 1-6, 8-13, 15, & 16 are allowed.
2. The following is an examiner's statement of reasons for allowance: Claims 1-6, 8-13, 15, & 16 are towards an apparatus and method which comprises a sliding separator, wherein said separator engages said plurality of fibers and is slideable therealong to alter a separation therebetween, wherein the alterable separation facilitates the engagement of the optical fibers with individual samples disposed in wells of any one of a variety of different-sized sample plates having different spacing between the wells suitable for spatially separating said optical fibers from one another in a pattern that enables said optical fibers to physically engage individual samples on a sample plate.
3. The prior art of record does not disclose nor suggest a sliding separator with this configuration.
4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Telephonic Inquiries

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to BOBBY RAMDHANIE whose telephone number is (571)270-3240. The examiner can normally be reached on Mon-Fri 8-5 (Alt Fri off).
